
Proposed Part E

MSID	Circuit Name	Electrically Closest GSP(s) ¹	Connection Voltage (kV)	Voltage of circuit to which the meter is physically connected (kV)	Maximum export capability of connected total system circuit(s), (MW)	Maximum import capability of connected total system circuit(s), (MW)	Maximum export capacity of connection to total system, (MW)	Maximum import capacity of connection to total system, (MW)	Expected import/export data over time	Expected Import/Export volume behaviour	Have any of the parameters in previous columns and/or the LLFs change from the values previously submitted?

¹ If another Distribution System lies between the metering point and the electrically closest GSP(s) please provide details below:
