Title (mandatory by originator) Amend the SVAA software to improve performance relating to the Selection of Default Data During a SSR Run.

Description of Change *(mandatory by originator)*

The "Specify SSA Run/Data Aggregation Files for SSR Run" screen displays a large list of all files for the user to select a file to be used default data. Since this list is very large in the live environment a significant amount of time is spent by the user in selecting the file. It is proposed that the screen will be amended to simplify the selection criteria and consequently reduce the time spent in using this screen.

Proposed Solution(s) *(mandatory by originator)*
The "Specify SSA Run/Data Aggregation Files for SSR Run" screen will be amended as follows:
- Change the query to reduce the number of rows returned
- Turn off the switch on the aggregation run number that checks the value entered against a list of values
- Introduce a trigger that validates the run number against the database
- Unprotect the settlement date and settlement code fields to allow the user to enter values
- Validate the entries and populate the aggregation run number field.

Justification for Change *(mandatory by originator)*

The current slow operation of this screen incurs additional operational costs by CGEY when selecting default data. These costs are passed on the to ELEXON. The performance improvement will reduce these additional operational costs.
The proposed change has been requested by CGEY and the solution agreed with CGEY.

Other Configurable Items Potentially Affected by Proposed Solution(s) *(optional by BSCCo)*

None

Impact on Core Industry Documents *(optional by originator)*

None
