

**Change Proposal – F40/01 (Page 1 of 2)****CP No: 778**  
*(mandatory by BSCCo)***Title** *(mandatory by originator)*

Inclusion of approved CRs in BSCP504 v4.0

**Description of Change** *(mandatory by originator)*

Before NETA go-live, the Agreed Procedures (APs), which formed part of the Pool Documentation, were reformatted and re-badged as the BSC Procedures (BSCPs). ELEXON has identified a situation regarding BSCP504 in which the latest set of approved amendments made to the corresponding AP, initially driven by SIR R2803, have not been reflected in the BSCP. Therefore a whole batch of approved changes is required to be included in BSCP504.

**Proposed Solution(s)** *(mandatory by originator)*

The following Pool CRs to be incorporated into BSCP504. As the section numbers differ between AP504 and BSCP504, and the CRs refer to the APs, the impacted BSCP sections are listed here as a guide:

<u>CR Number</u>	<u>BSCP504 section(s)</u>
2538	2.2.2, 3.1.2
2237	2.3.6
2256	3.1.2
2244	3.2.1, 3.4.2
2535	3.3.3
2237	3.3.6
2895	3.3.11
1853	3.4.1

These CRs should be implemented in BSCP504 using the redlined AP504 issue 9 v8.15 (attached) as a reference, rather than the CRs themselves. The changes included in the AP have already been reviewed and approved, and so the wording and formatting used should be replicated in the BSCP.

**Justification for Change** *(mandatory by originator)*

At present, BSCP504 does not reflect all the procedures that were agreed and incorporated into AP504.

**Other Configurable Items Potentially Affected by Proposed Solution(s)** *(optional by BSCCo)*

None.

**Impact on Core Industry Documents** *(optional by originator)*

None

**Related Changes and/or Projects** *(mandatory by BSCCo)*

None
