iv Change History

- Issue 1.0 First formal issue for NETA. This document is the ELEXON Data Interfaces document v5.0 plus all changes delivered by the Implementation of NETA within Stage 2 Project and has been re-badged for NETA.
- Issue 2.0 For approval by the Panel on 22 February 2001 (Panel paper 13/016).
- Issue 2.1 Changes as required for SIRs R1964, R2092, R2180, R2296, R2668, R2896, R2907, R2928, R3010 and R3011.
- Issue 3.0 Approved by the Panel (P/15/013).
- Issue 3.2 Changes required by CP704 and internal database restructure
- Issue 3.3 Changes required for CP690, UMS (Unmetered Supplier) Clarifications and Improvements.
- Issue 4.0 Changes required for Modification P30, availability of market information to BSC and non-BSC parties.
- Issue 4.1 Changes required for Modification P68 and CP760.
- Issue 5.0 Approved by SVG (SVG/21/259 and SVG/16/190)
- Issue 5.1 Changes for CP518, CP696, CP698, CP774, CP792, CP799, CP805 and CP914.
- Issue 6.0 Approved by SVG (SVG/22/275)
- Issue 7.0 Changes required for Modification P91 'Extension to Data Provided to the Transmission Company in the TUoS Report'. Approved by SVG (SVG/24/319).
- Issue 8.0 Changes required for Modification P88 'Introduction of obligations in relation to SVA Metering, Meter Operator Agents and Equipment Owners', CP861 and CP899. Approved by SVG (SVG/27/364), (SVG/25/345) and (SVG/25/342).
- Issue 9.0 Changes required for Modification P62 'Changes to Facilitate Competitive Supply on the Networks of New Licensed Distributors'. Approved by SVG (SVG/29/390).
- Issue 10.0 Changes required for the SVA August 03 Release. Approved by SVG (SVG/29/389, SVG/30/397).
- Issue 11.0 Changes required for Modification P81 'Removal of the Requirement for Half Hourly Metering on Third Party Generators at Domestic Premises'. Approved by SVG (SVG31/414).
- Issue 12.0 Changes required for CP1003, CP1004 and CP1005. Approved SVG (SVG/36/487).
- Issue 13.0 Changes required for CP947 'Removal of References to Sending D0281 (BSCP508 & SVA Data'. Approved by SVG (SVG/43/003).
- Issue 14.0 Changes required for CP1043 'Reporting Meter Advance Reconciliation (MAR) overdue status by Half Hour Data Collectors (HHDCs) in their monthly reporting' SVG. Changes Required for BETTA 6.3 and CP1043 'Reporting Meter Advance Reconciliation (MAR) overdue status by Half Hour Data Collectors (HHDC) in their monthly reporting'
- Issue 15.0 Changes required by CP1097 for the SVA June 05 Release. Approved by SVG (SVG/51/004).
- Issue 16.0 Changes required by CP1036, CP1098 and CP1105 for the SVA Nov 05 Release. Approved by SVG (SVG/56/004).
- Issue 17.0 Changes required by CP1093 and CP1127 for the Feb 05 Release. Approved by SVG (SVG/60/004).
- Issue 18.0 Changes required by CP1138 for the Nov 06 Release.

Approved by SVG (SVG/67/09).

Issue 19.0 Changes required by P196 and CP1159

Approved by SVG (SVG/70/01)

Issue 20.0 Changes required by CP1181 for the June 2007 Release.

Approved by SVG (SVG/75/02)

Issue 21.0 Changes required by P197 for release on 23rd August 2007.

Approved by SVG (SVG/76/02)

Issue 22.0 Changes required by CP1200 and CP1210 for the November 2007 Release.

Approved by SVG (SVG/77/04 and SVG/79/02)

Issue 23.0 Changes required by CP1196 for the February 2008 Release.

Approved by SVG (SVG77/04)

Issue 24.0 Changes required by CP1208 and CP1209 for the June 2008 Release.

Approved by SVG (SVG82/03)

Issue 25.0 Changes required by CP1234 for the November 2008 Release.

1. INTRODUCTION

1.1. Purpose

This document provides the Data Catalogue supporting the definition of the interfaces between ELEXON-delivered or certified applications and BSC Procedures, for communications between SVA data parties. It forms part of the "SVA Data Catalogue" as defined in Section O of the BSC.

A Data Catalogue is a collation of the set of data items used in the definition of a business or the development of an IT system. It provides a current, common, complete and consistent definition of data items and their relationships available to all users whilst being centrally managed. This aids comprehension, re-use, communication and control, thereby providing benefits in the areas of efficiency and quality.

This is one of a set of five closely related documents, the others being:

- SVA Data Catalogue Volume 1 (reference 1). Defines the interfaces and file structures required for the data transfers between ELEXON-delivered or certified applications and SVA data parties.
- BSC Data File Catalogue (reference 2). Defines the data interfaces between BSC Agents and BSC Parties and Party Agents for all communications, other than SVA Communications, as set out in the BSC Section O.
- The BSC Reporting Catalogue (reference 3). Catalogues and provides further information on the contents of reports issued by the BSC Agents as defined in Section X Annex X-1 of the BSC.
- The BSC Communication Requirements Document (reference 4). Contains detailed requirements for sending and receiving communications between Parties and BSC Agents using one or more Communications Media.

This document is also closely related to the MRA Data Transfer Catalogue (reference 5), which details the definitions of all data flows and data items used over the Data Transfer Network.

1.2. Objective

It is the objective of this Data Catalogue to achieve benefits of efficiency and quality for users and application systems within Supplier Volume Allocation under the BSC. This requires that:

- the data item definitions are definitive, common, complete and consistent within the constraints of current scope;
- the Data Catalogue is available electronically to all users and is centrally managed.

1.3. Summary

The SVA Data Catalogue is a Balancing and Settlement Code (BSC) subsidiary document defined in Section O of the BSC. It consists of two volumes: Volume 1 defines interfaces and file structures; this Volume 2 defines the data items used in those interfaces.

Earlier versions of this Data Catalogue provided a framework for system specification and design during the 1998 Pool Programme and were consistent with the user requirements specification documents (URSs) produced by that Programme. As a result, the relationship between data items and the URSs in which they occur was reported. With the relevant systems now in place, from Issue 20.0 of this Volume 2, these relationships are no longer reported.

This Data Catalogue is consistent with the Physical Design of the ELEXON-delivered applications i.e. NHHDA, EAC/AA and SVAA systems. It also supports the published BSC

Procedures for operation of Supplier Volume Allocation under the New Electricity Trading Arrangements.

Following this introductory section, section 2 describes the concepts used to produce the Data Catalogue in the body of this document, in terms of the concepts used and the information provided. The Data Catalogue itself is made up of the following set of Appendices:

- Appendix A provides an index of all data items used by Settlement, along with the location (SVA Data Catalogue or MRA Data Transfer Catalogue) in which each data item is defined in full;
- Appendix B provides a cross reference between data items and the data flows in which they are used, ordered by data item name;
- Appendix C provides a full definition of data items identified in Appendix A;
- Appendix D provides a cross-reference between data items and any synonym of the item, grouped by the parent data item.

1.4. Scope

The scope of the data items defined in this document are those enabling the flow of data required for Supplier Volume Allocation, as defined in paragraph 1.4 of Section O of the Balancing and Settlement Code.

It does not cover those data items:

- concerned with Central Volume Allocation and Settlement;
- contained in manual inputs to systems these (user interfaces) are specified in the relevant system specifications; or
- not required under the BSC.

Where a data item is defined within the MRA Data Transfer Catalogue, this document will identify the item and make a reference to the DTC for the full details of the definition.

Any acronyms used in this document in relation to any data items are defined in Section X of the Balancing and Settlement Code (reference 6).

1.5. Responsibilities

It is the responsibility of all SVA data parties to adopt the Data Catalogue. This will require the following:

- incorporating the Data Catalogue within their own area of responsibility. For example, this may occur during initial compliance or following authorised updates to the Data Catalogue;
- raising change requests to update the Data Catalogue. For example, changes to
 existing definitions or the addition of new data items as identified in their own area of
 responsibility.

It is the responsibility of the Data Catalogue owner to manage the Data Catalogue. This includes the following activities, which may be delegated:

- provide SVA data parties with shared access;
- make updates authorised by the change control procedure;
- fulfil the role of a Data Manager with responsibility for monitoring the use of standards, arbitration, general housekeeping, etc.

The current owner of the Data Catalogue is the ELEXON Design Authority.

2. DATA CATALOGUE CONCEPTS

2.1. Overview

To aid comprehension of the Appendices to this document, and its companion volume, the Data Catalogue is specified in terms of:

- a Logical Data Structure, comprising a set of entities, attributes and relationships, that defines the concepts appearing in the Appendices to this document;
- a definition of the meaning of, and standards applied to, the various fields in data item descriptions as they appear in the Appendices.

(The Logical Data Structure uses SSADM data modelling syntax and semantics.)

2.2. Logical Data Structure

The Logical Data Structure for the Data Catalogue is shown below in Figure 1.

Figure 1: Logical Data Structure for the Data Catalogue

2.3. Entity Definitions

The entities in this model (rounded rectangles) represent the concepts found in this catalogue. These concepts are defined as follows.

(a) Data Item

This entity describes the set of data items in the SVA domain, at the lowest level of reusability.

The data item entity has the following attributes:

Name

Description

Is synonym

Units

Valid set text

Valid Set

Logical Format

Default Value

Notes

Acronym

(b) Document

This entity describes the set of documents that have been used to identify the required data items.

The Source Document entity has the following attributes:

Name

(c) Domain

This entity describes the set of domains to which the required data items may belong.

The Domain entity has the following attributes:

Name

Description

System Usage

Units

Valid Set

Validation

Picture

Logical format

Notes

(d) Data Flow

This entity describes the set of data interfaces that have been used to identify the required data items.

The Data Flow entity has the following attributes:

Name

Reference

Version

DNumber

BNF set

Notes

(e) Participant Type

This entity describes the set of SVA data user types that issue and/or receive data flows.

The Participant Type entity consists of the following attributes:

Code
Description
DTC code

2.4. Relationships

Individual occurrences of the entities described above are associated with each other as defined by the relationships in Figure 1 (non-directional arcs between the entity symbols). The meaning of these relationships helps clarify the concepts concerned, as follows.

(f) Data Item Has Synonym

This relationship describes the existence of duplicate data items, albeit with different names and possibly attribute values. This relationship can occur for a number of reasons, including:

- an existing data item is not re-used but is re-created with a different Data Item Name, in this case all other attributes would have the same values e.g. Record Type is synonymous with Record Code;
- a data item is used in more than one role within the business. In this case the synonyms' Data Item Description and Valid Set attributes may vary and will usually identify a subset of the master definition;
- a generic data item is created to provide a single definition for a data item which is legitimately repeated many times in the business. Each occurrence has a different Data Item Name and Data Item Description but otherwise the same definition, e.g. Period Register On State Indicator has synonyms Period Register On State Indicator (Settlement Period 01) through Period Register On State Indicator (Settlement Period 50).

The relationship is optional. If it occurs then a data item can be a synonym of one and only one data item. A data item can have any number of synonyms.

(g) Document uses Data Item

This relationship identifies a requirement for a data item. This relationship is maintained for the user requirements specification documents (URSs) and the BSC Procedures that contain data item lists.

This relationship is optional. A data item may be associated with one or more source documents.

(h) Data Item in Domain and Domain in Domain

These relationships define the domain of data items and, where required, the super-type domain of a domain.

The first relationship is mandatory:

- a data item must be associated with one domain;
- a domain may be associated with one or more data items.

The second relationship is optional:

- a domain may have a super-type of one domain;
- a domain may be the super-type of one or more domains.

(i) Specified Usage

This relationship defines the use of a data item in a data-flow as specified in the technical documents. As it is an "n"-to-"m" relationship (a flow contains a number of data items and the same data item can be used in several flows), this relationship is represented by an entity defining how the data item is used in this flow.

This Specified Usage entity has the following attributes:

Order

Group name

Group comment

Comment

Item value

Optional

Group sort order

Group sort sequence

(j) BSCP-defined Usage

This relationship defines the use of a data item in a data-flow as defined in the BSC Procedures. It is also an "n"-to-"m" relationship and is also represented by an entity defining how the BSC Procedure says the data item is used in this flow.

This BSCP-defined Usage entity has the following attributes:

Order

Group comment

Comment

Optional

Item value

(k) Flow route

These relationships define the source and target participant types of a data-flow. As this is an n-ary relationship, associating a data-flow both with its source participant type and with its target participant type, this relationship is represented by an entity storing the details of the source of the definition of this route. This entity has the following attributes:

Source

Source reference

Comment

Source type

Known in source as

The first branch of this relationship is mandatory and has a maximum occurrence of two:

• a data-flow must have both a source and a target participant type.

The other two branches of this relationship are optional:

- a participant type may be the source of several data-flows;
- a participant type may be the target of several data-flows.

2.5. Data Item Information Provided

Data items describe the lowest level of data re-usability that can be defined during Data Analysis. All data item attributes have been completed using either a valid value or one of the following options:

Any value

- None
- Not applicable
- Not known
- See synonym (used where the data item is a synonym).

The following sections describe the meaning of each data item attribute.

(I) Data Item Name

A short, meaningful name which uniquely identifies the data item. These names conform to the Data Item Naming Standard defined in 2.6 below.

(m) Data Item Description

A full description of the data item.

(n) Units

The unit of measurement of the data item.

(o) Valid Set

The set of valid values which the data item can take. Examples include:

- a range;
- specific values ('codes') and their meaning;
- "any within the constraints of the format".

It should be noted that the valid sets presented are those required to support the Stage 2 settlement process. There will be instances where the industry uses an extended (or restricted) version of the valid set values given. Where this is the case only the values shown here will be valid within the settlement process.

(p) Logical Format

A shorthand descriptor which summarises aspects of the domain and logical length. Valid values are:

•	BOOLEAN	where the item may take values True or False
•	CHAR(n)	where the item contains n characters
•	DATE	where the item identifies a date e.g. 30th June 1998
•	TIME 1615	where the item identifies a time e.g. 11 o'clock in the morning or
•	DATE/TIME	where the item identifies a time on a date e.g. 0915 on 2/11/98
•	TIMESTAMP available	where the item identifies a time on a date at the greatest precision
•	INT(n)	where the item contains n digits and is an integer
•	NUM places ¹	(n,m) where the item contains n digits of which m are decimal
•	n BIT format from meter	a feature of the SVA systems, used where the item is sent in BIT rs.

(q) Notes

Any notes concerning the data item not included in the description.

_

¹ n and m are integers.

(r) Acronym

Any industry standard acronym for the data item, defined in Section X of the Balancing and Settlement Code (reference 6).

(s) Default Value

A default value may be taken by a data item. Where a value has been specified this should be any value found in the Valid Set listed for the data item. Where a value has not been specified the default value will be described as either: "None" meaning no value has been specified as default; "Not required" meaning there is no meaningful value which is used by default.

(t) Domain

A domain defines a set of characteristics and a pool of values which are common to a set of data items and from which the actual attributes for a data item can be drawn.

Example

The following illustration shows the definition of a typical data item, together with associated attributes. Note: data item relationships are found in the appropriate appendices, relationships between data items and data flows are documented in Volume 1 (reference 1).

GSP Group Correction Scaling Factor

Description: A factor which can be applied to the GSP Group Correction Factor to define to what degree the

GSP Group Factor will be applied to a particular consumption component class.

Units: None

Valid Set: Greater than or equal to 0

S=0
 0<S<=1
 S=1
 GSP Group Correction Factor partially applied
 S=1
 GSP Group Correction Factor applied
 S>1
 GSP Group Correction Factor over-applied

Domain:RealLogical Format:NUM(4,2)Default Value:1

Acronym: WT BSC Annexe S2 *N*Notes: GSP Group Correction Scaling Weight.

2.6. Data Item Naming Standard

Data item names conform to the following guidelines:

- are not case sensitive;
- are unique within the Data Catalogue;
- contain only alphabetic characters from the English Language character set; single spaces between words have been used. Numbers and special characters (for example (){}[]!"£\$%^&*;:'@#~<>?/) have been avoided;
- are descriptive and in plain English with adjectives before nouns,.
 for example:

'Effective From Settlement Date' - correct; 'Settlement Date Effective From' - incorrect;

do not use redundant words. For example:

'Valid' where invalid values are not supported;

 are prefixed with the name or abbreviation of the parent entity where this helps differentiate between similar data items.

- do not include units unless they differ from the standard domain or are necessary to differentiate similar data items;
- define the True value of indicators;
- as far as possible, contain words spelt in full. Where this is not possible then words have been abbreviated by:
 - the use of acronyms and abbreviations as authorised in the Section X of the BSC (reference 6), starting with words at the end of the name;
 - omission of articles (a, the, etc.) where they add no meaning;
- use the following words in preference:

Use	Instead of
From	Begin, Start
To	End, Finish
Indicator	Flag

 Where a data item is considered well-established throughout the industry then, for the sake of common understanding, the existing name has been retained and the relevant guidelines ignored.

APPENDIX C - Data Item Definition

AA Effective From Settlement Date

Description: AA Effective from Settlement Date

Units: None

Valid Set: A valid date within the constraints of the format

Domain: Effective Date

Logical Format: DATE

Default Value: Not required

Acronym: Notes:

AA/EAC Indicator

Description: Bi-state indicator defining, for a non-half hourly metered Consumption

Component Class, whether the profiled consumption is based on an

Annualised Advance or an Estimated Annual Consumption.

Units: None

Valid Set:

A Annualised Advance

E Estimated Annual Consumption

Corrected CCC Deemed Take (Corrected Supplier Consumption)

Description: For a half hour period, the amount of energy attributed to a Supplier, within a

Consumption Component Class and GSP Group, after GSP Group

Correction has been applied.

Units: MWh

Valid Set:

Domain: Wholesale Energy

Logical Format: NUM(13,3) **Default Value:** Not required

CoS and Coincident CoMC Indicator

Description: An indicator to show whether the Change of Measurement Class (CoMC)

coincident with Change of Supplier (CoS) has been completed or not.

Units: None

Valid Set:

T, standing for True, meaning the CoMC coincident with CoS completed

successfully

F, standing for False, meaning the CoMC coincident with CoS not complete

Domain:IndicatorLogical Format:BOOLEANDefault Value:Not known

Acronym:

Notes: The value T indicates that the NHHMO should allocate the meter reading(s)

received from the new HHMO to the NHH meter register(s).

Notes: Internal length = 22,10 i.e. Oracle maximum

This data item is not used in any data flow defined in the Data Transfer Catalogue which has a similar item with a logical format NUM(13,3) for this

item (DTC v4.2).

Daily GSP Group Take

Description: The sum of GSP Group Take for a day.

Units: MWh

Valid Set: Any within the constraints of the format

Domain: Wholesale Energy

Logical Format: NUM(13,3) **Default Value:** Not required

Daily GSP Group Total Purchases

Description: A derived value of the total expected purchases for a GSP Group in a

Settlement Day.

It is derived from the Sum (over all Settlement Periods in the Day) of GSP

Group Take(j) * (1+TLM(j)) * (1+LRM(j)) *PSP(j).

Units: Pounds Sterling (£)

Units: MWh

Valid Set:

Domain: Wholesale Energy

Logical Format: NUM(13,3) **Default Value:** Not required

Acronym: Notes:

Data Aggregation Run Number

Description: The number, unique within Data Aggregator, automatically allocated to a

data aggregation run by a Data Aggregator.

Units: None

Valid Set: Unique positive integers, allocated sequentially starting from 1, within the

constraints of the format

Domain: Run Number

Logical Format: INT(7)

Default Value: Not required

Acronym: Notes:

Data Aggregation Type

Description: Bi-state code to show what type of aggregation a particular Data Aggregator

is performing (i.e. half hourly or non-half hourly).

Units: None

Valid Set:

H Half hourly
N Non-half hourly

Domain: Code **Logical Format:** CHAR(1)

Deemed Meter Advance

Description: A meter advance calculated when an actual reading is not available.

Units: kWh

Valid Set: Can be negative

Domain: Consumer Energy

Logical Format: NUM(8,1) **Default Value:** Not required

Acronym:

Notes: Length and format consistent with Meter Advance.

Default BM Unit Flag

Description: Denotes whether or not the BM Unit is the default for a Supplier in a GSP

Group.

Units: None

Valid Set:

T meaning True, the BM Unit is the default BM Unit

F meaning False, The BM Unit is not the default BM Unit

Domain: Indicator
Logical Format: BOOLEAN

Default Value: T

Acronym:

Notes: The Default BM Unit is used for a Supplier's energy volumes that have not

been explicitly assigned to a BM Unit or for a Supplier's energy volumes that have been assigned to an invalid BM Unit. The flag may be set to true for one and only one BM Unit for any one Supplier in a GSP Group on any one

Settlement Day.

Delete Flag

Description: Denotes whether a MSID Pair should be deleted

Units: None

Valid Set:

T meaning True, the MSID Pair should be deleted F meaning False, the MSID Pair should not be deleted

Domain: Indicator
Logical Format: BOOLEAN

Default Value: F
