

P344 IMPLEMENTATION CIRCULAR

Date	5 April 2019
To	CVA and SVA Release Circular distribution
From	ELEXON Project Delivery
Purpose	This circular notifies interested parties of the latest working versions of the IDD Part 1 and Part 2 spreadsheets updated for Project TERRE.

For Information: Working versions of the Project TERRE IDD Spreadsheets

What is the purpose of this Circular?

This circular notifies interested parties of the latest working versions of the Interface Definition and Design (IDD) Part 1 and Part 2 spreadsheets for Project TERRE. While these versions have not been issued formally for industry consultation yet, they form part of the design of Project TERRE and are intended for use by Virtual Lead Parties (VLPs) and other Balancing and Settlement Code (BSC) Parties to develop or amend their systems in readiness for Project TERRE implementation.

Background

ELEXON has previously shared early drafts of the IDD spreadsheets to support the GB Electricity Industry with their initial preparations for Project TERRE but noted that they were liable to change because Project TERRE design was still ongoing. As the design of the Project TERRE Settlement Reports and other Project TERRE interfaces has been agreed we believe that the latest working versions of the IDD spreadsheets are fit for use by VLPs and BSC Parties.

Where can I find the IDD spreadsheets?

The tables below lists the IDD documents. Please click on the link to review the changes

Configurable Item	Version	Comments
NETA IDD Part 1 spreadsheet	Draft C	Purple and Green text indicates fields that have changed since the previous draft
NETA IDD Part 2 spreadsheet	Draft C	Purple and Green text indicates fields that have changed since the previous draft

For more information, please visit the ['P344 Implementation Guidance: Project TERRE and Wider Access'](#) page of the ELEXON website.

When will the IDD Spreadsheets be approved?

As P344 'Project TERRE implementation into GB market arrangements' was implemented on 28 February 2019, and the P344 BSC changes only provided for a new BSC Procedure BSCP603 (title tbc) and revisions to BSCP602 'SVA Metering System Balancing Services Register' on the P344 Final Implementation Date (to be notified by National Grid), we are raising a Change Proposal (CP) to allow the implementation of all other BSC Configurable Items required to deliver project TERRE in full.

The IDD Part 1 and Part 2 spreadsheets amended for TERRE will be included in the scope of this CP and will be taken for approval in summer 2019.

What do I need to do?

Please use these versions of the IDD spreadsheets to develop your systems to be ready for TERRE implementation.

If you have any queries or comments, please send them to releases@elexon.com.
